SUMMARY

Full Stack Developer with 1 year of experience building scalable web applications using React.js and Node.js. Skilled in frontend development, API integration, and delivering reliable user experiences through effective collaboration with backend teams. Experienced in handling real-world client requirements, building responsive UIs, and developing production-ready features.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, HTML, CSS
- **Frontend:** React.js, Tailwind CSS, Bootstrap, Modular CSS
- **Backend:** Node.js, Express.js, REST APIs, WebSockets, Cron Jobs
- **Databases:** PostgreSQL, MySQL
- **Concepts:** Responsive Design (Flexbox, CSS Grid, Media Queries), API Integration, Performance Optimization, Cross-Platform Development, Secure Authentication, Two-Factor Authentication (2FA)
- **DevOps & Cloud:** AWS (S3, Amplify), Hostinger, Windows Server, CI/CD Pipelines (GitHub Actions, Git Runners), Kubernetes (Basics)
- **Tools:** GitHub, VS Code, Chrome DevTools
- **Soft Skills:** Communication, Team Collaboration

WORK EXPERIENCE

Super Admin – Micro-Frontend & Dynamic App Generator

- Engineered a micro-frontend ecosystem using Vite Module Federation to dynamically create and manage multiple sub-applications from a centralized Super Admin platform.
- Built a low-code/no-code application generator enabling users to create full applications (frontend + backend) through configurable forms without manual development.
- Designed a centralized Super Admin system for global control of sub-applications, including start/stop management and shared updates across apps.
- Implemented a JSON-driven layout engine and centralized component registry for dynamic UI generation and scalable extensibility.
- Developed a three-layer architecture (AdminPages, AdminFrontend, AdminBackend) to support modular app generation and API integration.
- Enabled cross-application component sharing, allowing updates at the Super Admin level to propagate across all generated applications.
- Built dynamic navigation and layout systems (header, sidebar) fully controlled via backend configurations.
- Optimized module federation setup with shared dependencies, runtime remote loading, and environment-agnostic configurations.
- Collaborated with backend teams to design schema-driven application generation and seamless API workflows.

Sammakka Sarakka Jathara – (MDMS)

- Developed a web-based system to monitor and manage smart meter data during a large-scale public event, integrating with external HES systems.
- Collaborated with Kimbal HES and backend teams to enable seamless real-time and interval-based data integration.
- Built queue-based data handling to process time-interval meter data efficiently.
- Integrated Google Maps API to visualize meter locations with interactive markers.
- Designed and developed multiple modules including dashboard (multi-level hierarchy), consumer management, ticketing system, MIS reports, load survey data, asset management, and user role management.
- Implemented role-based access control (RBAC) to manage user permissions and data visibility.
- Developed dynamic report handling, enabling selected reports to open in new tabs for better usability.
- Ensured smooth frontend-backend integration for accurate and real-time data display.
- Built responsive UI capable of handling large-scale meter datasets efficiently.

BestInfra Corporate Website – CMS-Driven Platform

- Solely developed the complete frontend from scratch, collaborating with stakeholders to define structure and user experience without predefined designs.
- Built a CMS-driven platform with all content dynamically rendered via backend APIs.
- Designed and implemented the frontend architecture, including reusable layouts, header, and footer components.
- Created a scalable layout system to manage multiple content-driven pages efficiently.
- Integrated CMS APIs to dynamically render content for case studies, blogs, projects, and products.
- Developed reusable components and dynamic pages for different content types.
- Implemented responsive UI and enhanced user experience with GSAP-based animations.
- Structured components for maintainability and scalable content updates.

GMR Hyderabad Airport

- Solely responsible for building the **complete frontend** of a **prepaid billing web application** for **GMR Hyderabad Airport** to manage electricity usage and payments across multiple shop meters.
- Designed and developed **all pages and UI flows from scratch** using **React.js**, without any design references or mockups.
- Architected **6+ modules** — dashboard, consumer management, billing, asset management, user management, and a centralized ticketing system.
- Integrated **REST APIs** for real-time meter data display across multiple profiles, collaborating with the backend team to define data contracts and ensure seamless data flow.
- Implemented **role-based access control (RBAC)** to manage page-level access and data visibility based on user roles.
- Delivered **dark/light mode** support to enhance overall usability and user experience.

DTR Monitoring & Visualization System – Warangal (TGNPDCL)

- Developed a web-based system to monitor and visualize Distribution Transformer (DTR) data across the Warangal region.
- Built an interactive dashboard using React.js to display multi-profile transformer data and operational metrics.

- Integrated Google Maps API to visualize geolocation of transformers for spatial monitoring and analysis.
- Implemented dynamic data visualizations using React and react-konva for better representation of transformer performance and load distribution.
- Designed a power triangle visualization to represent active (kWh) and reactive (kVArh) energy, improving interpretation of power factor.
- Structured and displayed feeder-level and meter-linked data for improved monitoring and decision-making.
- Improved usability by designing a clean and intuitive UI for efficient system interaction.

Singareni Billing System (Postpaid) – Asset Management & Visualization

- Developed the Asset Management module for a postpaid billing system handling large-scale meter infrastructure data.
- Built a custom node-edge visualization engine (NodeChart_V1) to represent hierarchical relationships between locations and meters.
- Designed a high-performance visualization system rendering 20,000+ meters using WebGL, SVG, Canvas, and HTML techniques.
- Implemented multi-renderer architecture for flexible and efficient data visualization across different rendering layers.
- Optimized performance using viewport culling to reduce rendering load for off-screen elements.
- Implemented efficient node lookup (Map-based) and optimized edge resolution for faster interactions.
- Improved rendering performance using requestAnimationFrame and React optimization techniques (useMemo, useCallback, React.memo).
- Reduced redundant renders by batching WebGL draw calls and minimizing state updates.
- Implemented progressive disclosure (expand/collapse) to handle large hierarchical datasets effectively.

Inventory Management System – Stock & Warehouse Operations

- Developed a full-scale inventory management system for stock tracking, warehouse operations, and analytics.
- Led frontend development using React.js, handling UI architecture, API integration, and real-time features.
- Implemented JWT-based authentication and role-based access control (RBAC) for secure multi-user workflows.
- Designed modules for vendor order tracking, warehouse intake with serial tracking, and client allocation.
- Enabled multi-warehouse stock management to improve visibility across distributed inventory locations.
- Integrated WebSocket-based real-time notifications for live updates on orders and stock movement.
- Built interactive dashboards for stock comparison and analytics insights.
- Developed a reusable design system with CSS variables supporting dark and light themes.

EDUCATION

Spandana Degree College	2024
<i>Bachelor of Science (B.Sc) in Mathematics</i>	Nalgonda, Telangana
<i>CGPA: 8.49/10</i>	
Srinidhi Junior College	2018
<i>Intermediate (MPC)</i>	Telangana
<i>Percentage: 53.1%</i>	

Sandhya High School

Secondary Education

Percentage: 70%

2016
